

AMENDMENTS IN THE CLAIMS

Please cancel claims 23-25 without prejudice.

1-25. (Cancelled)

26. (Currently Amended) ~~The method of claim 23 further comprising~~ A method for promoting healing of a wound comprising:

positioning an ultrasonic transducer having an operative surface in the vicinity of the wound;

emitting ultrasonic waves from the operative surface; and

reflecting at least some of the emitted ultrasonic waves toward the wound such that at least some of the ultrasonic waves contact the wound to promote healing thereof.

27. (Previously Presented) The method of claim 26 wherein reflecting includes reflecting the emitted ultrasonic waves by bone tissue.

28. (Previously Presented) The method of claim 26 wherein
positioning the transducer includes positioning the transducer substantially adjacent a first layer of skin; and
reflecting includes reflecting the emitted ultrasonic waves by a second layer of skin.

29. (Currently Amended) ~~The method of claim 23~~ A method for promoting healing of a wound comprising:

positioning an ultrasonic transducer having an operative surface in the vicinity of the wound, wherein the ultrasonic transducer has an axis; and

emitting ultrasonic waves from the operative surface such that at least some of the ultrasonic waves contact the wound to promote healing thereof, wherein emitting ultrasonic waves from the operative surface comprises directing the ultrasonic waves toward an area offset from the axis.

30. (Previously Presented) The method of claim 29, wherein the area is offset from the axis by a predetermined angle.

31. (Previously Presented) The method of claim 29, wherein the area offset from the axis contains at least a portion of the wound.

32. (Previously Presented) The method of claim 29, wherein the area offset from the axis contains an ultrasonic reflective material.

33. (Previously Presented) The method of claim 32, wherein the ultrasonic reflective material is a bone surface.

34. (Previously Presented) The method of claim 33, wherein the ultrasonic reflective material is a skin surface.

35. (Previously Presented) The method of claim 33, wherein the ultrasonic reflective material is an internally disposed reflective medium.

36. (New) A method for promoting healing of a wound comprising:
positioning an ultrasonic transducer having an annularly-shaped operative surface in the vicinity of the wound; and
emitting ultrasonic waves from the operative surface, such that at least some of the ultrasonic waves contact the wound.

37. (New) The method of claim 36, wherein positioning the transducer in the vicinity of the wound comprises substantially encircling the wound by the annularly-shaped operative surface.
